

# Portal Press

For small to medium size truss plants an efficient partner to flow-through

The Portal Press & Kwikset Jig System is ideal for small to medium size truss plants. The MiTek Portal press is designed to work with flow-through style jigs, providing the pressing capability to any jig setup.

The MiTek Portal press comes standard with a regenerative (regen) valve to speed up the pressing cycle and an auto-retract feature so the operator doesn't need to manually open the C-Frame press before moving on to the next joint. These two features minimise pressing time and maximise output.

## FEATURES

- 30T C-frame press head with regenerative valve and auto retract.
- Two handed operation for operator safety.
- Simple and robust construction.

## PHYSICAL DATA

Overall equipment dimensions	Length (Width of A-frame): Overall length based on the length of the Kwikset jig Width (A-frame center-to-center): 6m or 7.4m Height (Ground to top of I-beam): 2630mm
Single press head	30T press capacity (45T option)

## ELECTRICAL DATA

Hydraulic power pack motor	7.5kW
Power requirements	415 V, 3 Phase, 20 A (includes the drive motors).

## OPTIONS

- 45T press head.
- 7.4M nominal width to suit jig with bottom chord press.
